**Note:** If a connection or other problem occurs during gameplay, and the game is interrupted, it will resume the next time the game window is opened.

## JACKPOT

A jackpot can be won if all 3 lines are selected and 3  symbols are obtained on one of the lines. The jackpot amount is determined by the bet amount selected among the four displayed depending on the number of lines chosen (but it is not multiplied by the amount bet per line, if won). The current amount for each of the 4 jackpot levels (numbered 1 to 4 in increasing order) is displayed in a ticker box in the upper right corner of the game window. For each bet wagered by a player, a portion of the wager funds the increment of the jackpot and another portion funds the base amount of the jackpot, for a total contribution of 10%. The level-1 jackpot starts at \$1,000, the level-2 jackpot at \$5,000, the level-3 jackpot at \$10,000, and the level-4 jackpot at \$25,000. There is no maximum jackpot amount.

If the jackpot is won, the game instance of the winning player is momentarily disconnected from the jackpot system. The contributions of that player to the jackpot are suspended, and there will be no increase of the jackpot in that player's game environment, until reconnection. Upon reconnection to the jackpot system, the jackpot will be credited to that player, and the jackpot amount will reflect that win, as well any amounts added to the jackpot in the meantime.

Because of data transfer delays, it may take up to 30 seconds before the jackpot display is updated after the jackpot has been won. If you win a jackpot, the win amount may therefore differ from the one shown in the jackpot display. Also, if multiple players win a jackpot at the same time, the win amount may be lower than the amount shown in the jackpot display.

In case of disruption of the jackpot system, all wins and contributions are queued until normal jackpot operation is restored.

## RETURN TO PLAYERS

The theoretical return to players is **84.96%** with 1 active line, **84.98%** with 2 active lines and **94.95%** with 3 active lines.

Malfunction voids all pays and plays.
